SOLAR PRO. 17 series lithium iron phosphate battery voltage

What voltage does a lithium iron phosphate (LiFePO4) battery have?

We understand the importance of having accurate and reliable information about lithium iron phosphate (LiFePO4) batteries and their voltage characteristics. In this comprehensive guide, we aim to provide you with detailed insights into LiFePO4 battery voltages across various systems, including 3.2V, 12V, 24V, and 48V.

What is the voltage of a lithium phosphate battery?

Every lithium iron phosphate battery has a nominal voltage of 3.2V, with a charging voltage of 3.65V. The discharge cut-down voltage of LiFePO4 cells is 2.0V. Here is a 3.2V battery voltage chart. Thanks to its enhanced safety features, the 12V is the ideal voltage for home solar systems.

What is a lithium iron phosphate battery?

Lithium Iron Phosphate batteries also called LiFePO4are known for high safety standards, high-temperature resistance, high discharge rate, and longevity. High-capacity LiFePO4 batteries store power and run various appliances and devices across various settings.

Why is voltage chart important for lithium ion phosphate (LiFePO4) batteries?

Voltage chart is critical in determining the performance, energy density, capacity, and durability of Lithium-ion phosphate (LiFePo4) batteries. Remember to factor in SOC for accurate reading and interpretation of voltage. However, please abide by all safety precautions when dealing with all kinds of batteries and electrical connections.

How many volts does a LiFePO4 battery have?

As the battery approaches full charge, the voltage plateaus around 3.6 to 3.7 voltsper cell, as illustrated in the battery voltage curve below. By comparing the battery's voltage to the standardized chart, users can estimate the remaining capacity. Below, we provide voltage charts for 12V, 24V, and 48V LiFePO4 batteries.

What is the minimum discharge voltage for a LiFePO4 battery?

The minimum discharge voltage of a LiFePO4 battery is typically around 2.5 to 2.8 volts per cell. Discharging the battery below this voltage threshold can lead to irreversible damage and significantly reduce its cycle life. To protect your LiFePO4 battery and maximize its lifespan, use a battery management system (BMS) to prevent over-discharging.
