

What is the difference between 24v and 48V lead-acid batteries?

The 24V lead-acid battery voltage ranges from 25.46V at 100% charge to 22.72V at 0% charge; this is a 3.74V difference between a full and empty 24V battery. Let's have a look at the 48V lead-acid battery state of charge and voltage decreases as well:

What is a 48V lead acid battery?

The 48V lead-acid battery state of charge voltage ranges from 50.92 (100% capacity) to 45.44V (0% capacity). Lead acid battery is comprised of lead oxide (PbO<sub>2</sub>) cathode and lead (Pb) anode. The medium of exchange is sulphuric acid. Most common example of lead-acid batteries are car batteries.

How much voltage does a 12V lead acid battery have?

Similarly to the 6V lead battery, we see that the 12V lead acid battery reaches the actual 12V voltage at the 40% to 50% range (43% is the exact capacity percentage). At 100% charge, a 12V lead acid battery will have a 12.73V voltage.

What is a 24V lead acid battery used for?

This is a 24V 3.5AH sealed lead acid battery suitable for a variety of uses including alarms systems, gate and garage door operators.

What is a 6V lead acid battery?

Here we see that a 6V lead acid battery has an actual voltage of 6V at a charge between 40% and 50% (43%, to be exact). The voltage spans from 6.37V at 100% charge to 5.71V at 0% charge. It is also important to note that lead batteries have a depth of discharge (DoD) close to about 50%.
