

After the breakthrough of battery technology

Will a new battery chemistry boost EV production?

Expect new battery chemistries for electric vehicles and a manufacturing boost thanks to government funding this year. BMW plans to invest \$1.7 billion in their new factory in South Carolina to produce EVs and their batteries. AP Photo/Sean Rayford Every year the world runs more and more on batteries.

Which companies have made advances in battery recycling technology in 2024?

Several companies made advances in battery recycling technology in 2024. Altilium has developed a hydrometallurgical recycling technology that achieved over 97% lithium recovery from LFP batteries. The company has demonstrated its ability to recycle both LFP and NMC batteries.

Are batteries the future of energy?

The planet's oceans contain enormous amounts of energy. Harnessing it is an early-stage industry, but some proponents argue there's a role for wave and tidal power technologies. (Undark) Batteries can unlock other energy technologies, and they're starting to make their mark on the grid.

Can new battery technologies reshape energy systems?

We explore cutting-edge new battery technologies that hold the potential to reshape energy systems, drive sustainability, and support the green transition.

Are solid-state batteries paving the way for a new era of energy storage?

Rapid advancements in solid-state battery technology are paving the way for a new era of energy storage solutions, with the potential to transform everything from electric vehicles to renewable energy systems.

Can batteries unlock other energy technologies?

Batteries can unlock other energy technologies, and they're starting to make their mark on the grid. This article is from The Spark, MIT Technology Review's weekly climate newsletter. To receive it in your inbox every Wednesday, sign up here. Batteries are on my mind this week. (Aren't they always?)

Solid-state batteries have long been touted as the technological breakthrough that electric car makers are striving to bring to market. Finally, it looks like 2025 could ...

#2. Lithium-ion battery with water. The risk of fires or explosions due to manufacturing defects, damage, or thermal runaway is an Achilles heel for li-ion batteries.

Dr. Goodenough, a Materials scientist, and a professor at the University of Texas at Austin, played a pivotal role in advancing lithium battery technology. In the 1980s, his research led to a monumental breakthrough: the ...

After the breakthrough of battery technology

Discover the cutting-edge of energy storage with solid-state batteries, where innovations in inorganic solid electrolytes are enhancing safety and performance. This technology promises significant advancements for ...

Instead of just making lithium-sulfur batteries more durable, a new breakthrough in battery chemistry has resulted in increased charge and discharge rates, which could give electric mobility a ...

A research team led by Professor Jihyun Hong from the Department of Battery Engineering Department of the Graduate Institute of Ferrous & Eco Materials Technology at POSTECH, along with Dr. Gukhyun Lim, has developed a groundbreaking strategy to enhance the durability of lithium-rich layered oxide (LLO) material, a next-generation cathode material ...

Massachusetts Institute of Technology researchers have developed breakthrough battery tech that could speed up the renewable energy transition. Made from currently abundant and inexpensive materials, the ...

This cycle was able to be repeated up to 200 times in an experimental battery offering around six times the density of today's lithium-ion technology. Less is more

A broad array of companies are competing to become the pioneers of the battery technology used in electric vehicles and energy storage.

With their new advancements in solid-state EV battery technology, they have been able to create a battery that sees a 10% reduction in cost and a 20% increase in range. Although numerous signs point to new ...

The comments come after the world's largest carmaker by sales surprised investors last month with plans to commercialise its solid-state battery technology in an electric vehicle by 2027 at the ...
