

# Amsterdam battery wholesale and retail market

Are batteries a barrier to energy storage in the Netherlands?

Under the Electricity Act 1998, generation is exempt from the payment of transmission costs, but consumption is not. This highlights one of the main barriers to energy storage in the Netherlands, as batteries currently pay more transmission costs than polluting wholesale consumers.

Are battery energy storage systems a direct source of flexibility?

An important direct source of flexibility for the electricity market, are battery energy storage systems (BESS). DNV has been commissioned by Invest-NL to examine the Dutch wholesale and balancing market developments and opportunities for BESS.

Should electricity storage be regulated in the Netherlands?

However, the Dutch regulatory authority, the Netherlands Authority for Consumers and Markets (ACM), can grant exemptions where electricity storage is necessary for grid operators to perform their statutory duties but where market participants are not sufficiently investing in storage capacity.

Will net metering boost home battery storage in the Dutch market?

The envisaged gradual phase-out of net-metering scheme, beginning in 2025, is expected to boost home battery storage in the Dutch market. In order for certain environmentally harmful activities to be performed, Dutch law requires an environmental permit to be obtained by the developer.

Do you have to register a car battery in Nederland?

Unless you have an exemption. You must register batteries for cars, such as starter batteries and EV-batteries with Auto Recycling Nederland (ARN). Retailers selling (products containing) batteries and accumulators must take back discarded batteries and accumulators free of charge. They must inform the consumer where they can hand in the batteries.

What is the passive Imbalance Market in the Netherlands?

The passive imbalance market in the Netherlands offers energy storage opportunities characterized by its volatility. BESS operators can capitalize on this market by strategically charging during negative price periods and discharging when prices rise.
