

Why does my car battery light come on while driving?

Make sure to check your maintenance schedule and replace the parts on time. If the battery light comes on while driving, it indicates an issue with the car's charging system, such as a faulty alternator, damaged battery, loose or corroded connections, or a broken serpentine belt.

What if my battery charge warning light comes on?

If your battery charge warning light comes on, drive straight to your local garage. You can't harm your vehicle by driving with the battery warning light flashing, and it doesn't mean that you need a new battery. However, as you drive, your car draws energy from the battery.

What does a car battery warning light mean?

The car battery warning light illuminates on the dashboard when the ECU detects a problem with the battery unit or its charging system. It may indicate a low voltage, resulting from a damaged, corroded or worn battery, or a damaged alternator, for example. Keep reading for more information on what different battery indicator lights mean.

What does low battery voltage mean on Audi?

Low battery voltage can trigger the Audi Drive System Malfunction warning. Even if the battery is good, the charging system might not be providing enough power for a standard charge. This occurs if the vehicle is not driven regularly and causes the vehicle's computer to constantly drain power from the battery.

What causes a warning light on a car alternator?

A flat or failing battery - if the battery can't hold its charge properly, it may trigger the warning light. Loose or corroded battery terminals - this can interrupt the flow of electricity. A damaged drive belt - if the car serpentine belt that drives the alternator is loose, worn, or broken, the alternator can't recharge the battery.

Why is the battery warning light illuminated?

Common reasons why the battery warning light is illuminated: A flat or failing battery - if the battery can't hold its charge properly, it may trigger the warning light. Loose or corroded battery terminals - this can interrupt the flow of electricity.
