

Battery grade manganese sulfate price forecast

How much does manganese sulfate cost?

Fastmarkets most recently assessed the price of manganese sulfate, 32% Mn min, battery grade, exw mainland China, at 4,800-5,650 yuan (\$667-786) per tonne on July 20. Alongside the potential origin premiums, questions have been raised about whether there could be premiums on product derived from manganese metal, or manganese ore.

Does manganese sulfate command a premium?

Some market participants believed that sulfate produced from manganese metal could command a premium, although production of sulfate via this route is relatively small. At present, the market is dominated by ore-derived sulfate, with market sources estimating that around 90% of total sulfate production comes from manganese ore.

Why is battery-grade manganese sulfate a problem?

In addition, due to the commonly used electrolytic manganese acid solution production of battery-grade manganese sulfate, the supply disturbance of electrolytic manganese will lead to a structural shortage of battery-grade manganese sulfate.

Will demand for manganese sulfate increase?

Demand for manganese sulfate is likely to grow significantly, but the current market pricing dynamics typically put it lower on the list of procurement priorities. "Manganese makes up 5-11% of the cell weight of current NMC battery chemistries, but around 1-2% of the cell cost," Fastmarkets battery raw materials analyst Robert Searle said.

Why is manganese sulfate important for electric vehicles?

Manganese plays a crucial role in the battery, offering stability during charge cycles and ensuring that the battery lasts longer, while metals such as nickel provide energy density. The growth in adoption of electric vehicles (EVs) globally has driven the demand for manganese sulfate.

What is the industrial application of manganese sulfate?

The traditional industrial application for the lower grade, industrial quality manganese sulfate has been the agricultural sector, but this is becoming less and less important in terms of consumption.
