Your GoPro requires a 5V 2.4A power supply. However many USB power supplies don't correctly report their output and therefore you'll see a message saying that your camera is shutting down due to low power. You can use the GoPro labs firmware to disable the power checking when your camera is connected to a USB power supply.

The battery started to drain and I noticed that it was constantly flipping between "charging" and "on battery power". When the computer is turned off it doesn't charge at all. Unfortunately I can't revert to Windows 10 on battery power and now my battery is extremely low! Has anyone experienced a similar problem? I'm not sure what to do.

16-inch MBP issues with power and top right USB-C port My MacBook Pro 16-inch 2019 is a few weeks old, and I have this issue where the battery icon indicates that the device is connected to a power adapter even though nothing is plugged into the MacBook Pro. Additionally, the top right USB-C port seems to be disabled, not accepting PD power or ...

The minus terminal of the first power supply is connected to the plus terminal of the second power supply and is labeled common. PSP works while connected to power outlet PSP does not even start when on battery. When plugged in with battery, if I disconnect the power supply cable, PSP will turn off immediately When plugged in with battery, the battery indicator at the top right of the screen shows 3 bars, but for only 10 seconds, then it will be actually blinking every ...

The battery is detected in Windows without issue and charges normally, but when the power supply is disconnected, the machine immediately cuts power. It will not boot ...

\$begingroup\$ I modified an old smartphone (Oppo Find 5) to work directly from a USB power supply by connecting the battery contacts to 5 V directly or via a diode to lower the voltage slightly. That works for that model phone. There is no guarantee that this will work for other phones as well! In the end, you will just have to try what works. Some phones need a lot ...

2. Make sure both battery connections are tight, if you can move the battery terminal it is not tight. 3. Make sure the battery connection to the body is clean and tight as well. 4. Check the engine to body ground cable is in place and clean and tight. 5. Check the transmission to body ground cable is in place and clean and tight. 6.

Battery has no response when connected to power supply

This will not let the battery load much so that it might not get damaged beyond repair. If you have a Li-ion battery that has been deeply discharged, the battery can be charged slowly, and one can restore the charge to the battery. To implement this method, you can connect a multi-meter between the battery and the charger.
