

Because the battery cannot provide power

Why is my laptop not charging a battery?

As a stop gap,if heat of the AC adapter is the issue,you could sit it on top a laptop cooler or direct a small fan to blow over it. It sounds like the laptop is dropping down the voltage trying to charge a battery which could be failing. Have you tried running the laptop without the battery? Either that or the power supply could also be failing.

Why are batteries not used?

Now,there are some reasons why batteries are not used,these are because of the nature of chemical processes in them. 1) The energy scales associated with chemical processes are inherently small. What I mean by that is you don't get chemical batteries producing 100V (just a number).

What happens if a battery is not connected to anything?

If the battery is not connected to anything,the chemical force is pulling on the ions,trying to draw them across the electrolyte to complete the reaction,but this is balanced by the electrostatic force-- the voltage between the electrodes.
