What is capacitor & how do I use it?

A cross-platform native runtime for web apps. Capacitor is an open source native runtime for building Web Native apps. Create cross-platform iOS, Android, and Progressive Web Apps with JavaScript, HTML, and CSS. Get started easily. Install the native platforms you want to target. Access core Native APIs or extend with your own.

What is a capacitor plugin?

Additionally, the plugin capability in Capacitor makes it possible for teams with a mix of traditional native developers and web developers to work together on different parts of the app. Capacitor automatically generates JavaScript hooks on the client, so most plugins only need to use Swift/Obj-C for iOS and/or Java/Kotlin for Android.

How does the capacitor CLI work?

The Capacitor CLI will automatically copy, sync, and run a debug build on whatever device you select. The Ionic VS Code extension is not only for Ionic Framework but for all Web Native projects. It is built, maintained, and iterated on by the Ionic team and can help you do the same for any of your Capacitor applications.

How do I add a capacitor to a Cordova app?

You can add Capacitor to your existing application by choosing "Integrate Capacitor". With Capacitor integrated, you can now run your app on web, Android, and iOS with the "Run On Web", "Run On Android", and "Run On iOS" options. If you are migrating from Cordova to Capacitor, the Ionic VS Code extension can speed up that process. The extension:
