SOLAR PRO. Capacitor film field survey

Are BOPP films suitable for DC metallized film capacitors?

The fundamental and applied properties of BOPP films required for application in state-of-the-art DC metallized film capacitors are reviewed, highlighting aspects related to high temperature operation, base PP properties and film processing.

Are Bopp capacitors reliable at high field?

The literature on the conduction and reliability of BOPP capacitor films at high field is vast, but is mostly focused on relatively high film thicknesses, generally from 6 µm to 25 µm. No literature was found by the authors investigating ultra-thin BOPP (2-4 µm), or for film thickness below 5 µm in general.

How reliable are film capacitors?

The most important reliability feature of film capacitors is their self-healing capability, i.e. their abil-ity to clear faults (such as pores or impurities in the film) under the influence of a voltage. The metal coatings, vacuum-deposited directly onto the plastic film, are only 20 ... 50 nm thick.

What is a polypropylene film capacitor?

Polypropylene film capacitors are often used in applications in which negligible discharge rates are required, because of their high insulation resistance (IR) and low conduction current, or leakage current (LC).

Can polypropylene capacitor films withstand electrical stresses?

A broad study of the performance of a modern polypropylene capacitor film is therefore warranted to serve as a baseline for further materials development, and to demonstrate the capability of BOPP films to withstand electrical stresses unrealistic for almost any other type of insulation.

What is a capacitor-grade BOPP film?

2 CAPACITOR FILM PROCESSING Capacitor-grade BOPP film is made of highly isotactic polypropylene. The molecular structure of PP with higher isotacticity is more regular. This enables packing that is more compact during crystallization, and thus enables the production of high crystalline films with reduced losses and conductivity.

Performance Metrics for a Modern BOPP Capacitor Film field de-rating. For a capacitor to operate reliably, its insulation materials must exhibit a high breakdown strength, low DC conductivity ...

The self-inductance or series inductance LS of a film capacitor is due to the magnetic field created by the current in the film metallization and the connections.

As the applied voltage increases, partial discharge has become one of the most important factors affecting the service life of metallized film capacitors. There

As shown in Fig. 1, capacitors have been selected as one of the most vulnerable components in power electronic system by nearly 20% of the responders according to an industry-based survey [2]. Compared to other types of capacitors, Metallized film capacitor (MFC) has the advantages of high voltage endurance, long lifetime and good reliability [3].

Capacitor film is a thin, flexible dielectric material used in the construction of capacitors. It serves as an insulating layer between the conductive plates of a capacitor, ...

Effects of Electromagnetic Field on Partial Discharge Behavior in BOPP Film Capacitors ... The magnetic field changes the charge-moving direction and reshapes the charge distribution through the Lorentz force. The influence of the magnetic field on internal discharge in the negative half cycle is more significant, by exciting electrons and ...

A film capacitor is a capacitor that uses a thin plastic film as the dielectric. They are relatively cheap, stable over time and have low self-inductance and ESR, while some film capacitors can withstand large reactive power values. Characteristics. Film capacitors are widely used because of their superior characteristics.

In this paper, a set of performance metrics for modern biaxially oriented polypropylene (BOPP) capacitor films is established. The fundamental and applied properties of BOPP films required for application in state-of-the-art DC metallized film capacitors are reviewed, highlighting aspects related to high temperature operation, base PP properties and film ...
