How much does a C&I energy storage system cost?

The cost components of the most common C&I energy storage systems are as follows: Battery: Depend on the type (e.g., lithium-ion, lead-acid), capacity (measured in kWh), and quality. Inverter: Depend on the capacity and features, ranging from several thousand dollars to tens of thousands of dollars.

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion, lead-acid, or flow batteries.

Are there other energy storage technologies besides LIBs?

There are a variety of other commercial and emerging energy storage technologies; as costs are characterized to the same degree as LIBs, they will be added to future editions of the ATB.

What is NREL's base year cost model?

Base year costs for commercial and industrial BESS are based on NREL's bottom-up BESS cost model using the data and methodology of (Ramasamy et al., 2022), who estimated costs for a 300-kW DC stand-alone BESS with four hours of storage. We use the same model and methodology, but we do not restrict the power or energy capacity of the BESS.
