Therefore, REWA will share a way to convert old phone batteries into a power bank, turning trash into treasure. Terminology: Anode = Positive terminal, Cathode = Negative terminal

Can old mobile phone batteries be reused?

Old mobile phone batteries can be reused in various projects. I have been using used batteries in my projects after discovering a module on eBay. The module comes with a Li-ion charger and a voltage regulator, enabling the increase of the Li-ion battery's voltage from the standard 3.7V's to up to 30V's.

Where can I get old mobile phone batteries for free?

You can get old mobile phone batteries for free from places that have mobile phone recycling bins. I have one at my work, which I periodically raid for batteries.

Should you replace a battery with a new one?

It's necessary to replace the old battery with a new one. For old batteries, simply throwing them away is a waste and can pollute the environment. Batteries are made from a number of materials including acid, lead, nickel, lithium, cadmium, alkaline, mercury, and nickel-metal hydride.

Can a lithium ion battery be changed?

CAUTION: Battery repair/modification can be dangerous. Exercise caution when following this guide. **DO NOT EXPOSE LITHIUM ION BATTERIES TO WATER OR FLAMES.** All batteries have a lifespan. For example, when a phone's battery capacity is below 80%, the phone's battery life will become very short.

What happens when using an old phone battery?

An old phone battery probably won't hold a full charge, but it will still be able to do most things at around 80% capacity. Li-ion batteries, which are commonly used in phones, are fussy. This is because they are a massive ongoing chemical reaction sealed away inside a plastic cover.

As long as you match voltage and provide enough current you can do it pretty easily with an old wall wart (like a cell phone charger). AA batteries are nominally 1.5V each so you need around 3V.

If you put 1 old battery in parallel with 1 new battery (of the same voltage), it will work fine. Similarly, if you always add batteries in parallel to a series of batteries, it'll be fine. The problem arises when you try and place old and new batteries in series. The new one tends to drive the weak/old one backwards.
