

Do I need to drain water when charging the battery

Does water drop if battery is not charged?

Yes and the water levels did not drop. When the battery is not charging or being discharged no activity is created by the plates consequently no water is evaporated or driven off. The batteries are closed so nothing can escape to the atmosphere except via the vent caps.

Should you drain a lithium ion battery before recharging?

For lithium-ion, it is actually now considered bad practice to completely drain the battery before recharging. NiCd and NiMH batteries need this to be done to minimize their so called "memory effect" - not so for Lithium Ion. In fact, it will actually be harmful for Li-Ion batteries. I quote you this paragraph from this [link](#)

Can a dry-charged battery be flooded?

NO! First, the theory: Dry-charged batteries are not prepared by flooding them, charging and draining them afterwards. Instead, the plates are press-formed with the approximately proper chemical composition corresponding to a fully or a partially charged battery.

Can a dry-charged battery be filled with acid / liquid?

Yes, this is possible. In fact we had deliveries of hundreds of dry-charged batteries and separate deliveries of the acid / liquid to fill them with. Guess who, as an apprentice, got to mix the acid to the correct SG and fill batteries. They were transported like that as the liquid is heavy and more batteries can be carried.

What happens if a battery is not charging?

When the battery is not charging or being discharged no activity is created by the plates consequently no water is evaporated or driven off. The batteries are closed so nothing can escape to the atmosphere except via the vent caps. The fact that you have to keep adding water indicates you are probably overcharging them.

Can a dry-charged battery be overcharged?

Overcharging and drying out the battery will also damage it. anecdotal: Been there, done that, would not recommend doing it again, the bit remaining acid dried out and left sulfates that partially destroyed the plates. NO! First, the theory: Dry-charged batteries are not prepared by flooding them, charging and draining them afterwards.

Do you need to drain your power bank or phone battery completely before recharging? Remember that age-old myth of draining a battery down to zero before charging it up to full again? It's something we were ...

With NiCd batteries, you have to drain them completely, or they will lose capacity (memory effect).. With NiMH (as in your case) it's recommended, but if you don't do it all the time, it's ok as long as you have a good

Do I need to drain water when charging the battery

charger that can correctly determine when the battery is full.

So, if you have an old or weak battery, it will not hold the same amount of charge as a new one. An old or weak battery, together with a parasitic drain, is a perfect combo for disaster. When ...

Hey Tesla community, I have a quick question about pre-conditioning the battery on my Model Y. Do I need to do it every single time I drive the car, or just in the mornings? And what about on the weekends when I may go out at random times? ... You want the Tesla Model Y's battery state of charge to ideally be at or less than 30% when you begin ...

No, you should NOT fully discharge a Lead-Acid battery. The normal reason for wanting to fully discharge a battery is because some batteries have a so-called "memory ...

For lithium-ion, it is actually now considered bad practice to completely drain the battery before recharging. NiCd and NiMH batteries need this to be done to minimize their so called "memory ...

It depends on the health of the battery before it was discharged and how long it was discharged. Working at a shop, we would top off the cells with distilled water, charge the ...

"Your Minn Kota trolling motor may be designed with an internal bonding wire to reduce sonar interference. Most alternator charging systems do not account for this bonding wire, and connect the negative posts of the trolling motor batteries to the negative posts of the crank/starting battery. These external connections can damage connected electronics and the ...

Even items like phone chargers can be a drain on your battery. Use a battery charger and maintainer - Battery chargers and maintainers are ideal for vehicles that will sit unused for more than a week. Once your battery ...

You do not need to disconnect your car battery before charging with modern, automatic chargers. ... Disconnecting the battery prevents unintentional battery drain during the charging process. Some electronic systems can continue to draw power even when the car is off. ... Cleaning terminals with a mixture of baking soda and water can prevent ...

Mistake #5: Charging a battery that is already heated up . Battery temperature is one of the factors that impact the charging time and charging power of your vehicle. An electric vehicle battery's maximum ...
