

Energy Storage Container Environmental Monitoring

Should energy storage systems be a container-type package?

(This article belongs to the Section Environmental Sensing) The implementation of an energy storage system (ESS) as a container-type package is common due to its ease of installation, management, and safety.

What is an energy storage system (ESS)?

The implementation of an energy storage system (ESS) as a container-type package is common due to its ease of installation, management, and safety. The control of the operating environment of an ESS mainly considers the temperature rise due to the heat generated through the battery operation.

What are containerized lithium-ion battery energy storage systems?

The containerized lithium-ion battery energy storage systems This work used the MW-class containerized battery energy storage system of an energy storage company as the research object. In recent years, MW-class battery energy storage technology has developed rapidly all over the world.

What does an energy storage system (EMS) do?

The EMS is mainly responsible for aggregating and uploading battery data of the energy storage system and issuing energy storage strategies to the power conversion system. These actions help it to strategically complete the AC-DC conversion, control the charging and discharging of the battery, and meet the power demand.

What is the operating environment of an ESS container?

The operating environment of an ESS must be managed within the operating range provided by the manufacturer. It is recommended that the ESS container used in this study be operated at 35~75% humidity and 18~28 °C. Figure 2 shows an example of the relative humidity, temperature of the container, and battery cell temperature during summer.

Can a container-type ESS control temperature and humidity?

In this study, temperature and humidity monitoring and management issues were addressed for a container-type ESS by building sensor-based monitoring and control systems. Furthermore, a rule-based air conditioner control algorithm was proposed for temperature and humidity management.
