

Energy storage charging pile preferential method

How to plan the capacity of charging piles?

The capacity planning of charging piles is restricted by many factors. It not only needs to consider the construction investment cost, but also takes into account the charging demand, vehicle flow, charging price and the impact on the safe operation of the power grid (Bai & Feng, 2022; Campaa et al., 2021).

Can fast charging piles improve the energy consumption of EVs?

According to the taxi trajectory and the photovoltaic output characteristics in the power grid, Reference Shan et al. (2019) realized the matching of charging load and photovoltaic power output by planning fast charging piles, which promoted the consumption of new energy while satisfying the charging demand of EVs.

What is a coupled PV-energy storage-charging station (PV-es-CS)?

Moreover, a coupled PV-energy storage-charging station (PV-ES-CS) is a key development target for energy in the future that can effectively combine the advantages of photovoltaic, energy storage and electric vehicle charging piles, and make full use of them.

How do fast/slow charging piles help EVs in a multi-microgrid?

Considering the power interdependence among the microgrids in commercial, office, and residential areas, the fast/slow charging piles are reasonably arranged to guide the EVs to arrange the charging time, charging location, and charging mode reasonably to realize the cross-regional consumption of renewable energy among multi-microgrids.

How to optimize EV charging/discharging behavior?

Based on the proposed dynamic optimization method of time-of-use electricity price, the particle swarm optimization algorithm is used to optimize the charging/discharging behavior of each EV in two stages by establishing a multi-objective function with the maximum charging power and the minimum charging cost.

Should EVs choose fast/slow charging modes for orderly charging?

A reasonable arrangement of fast/slow charging piles and guidance for EVs to choose fast/slow charging modes for orderly charging not only satisfy the differentiated charging demand but also reduce the EVs charging cost.
