

How to connect and charge a round battery

How do I connect a battery charger?

Connect the charger: Keep the charger as far from the battery as the cables will allow, and never leave the charger on top of the battery while it's charging! Connect the clamps of the charger to the terminals on the battery, matching positive to positive and negative to negative. Then, plug the charger in.

How do you charge a battery?

Use care to avoid spillage when handling and moving the battery to the site of charging. When the battery is sited on a stable, flat surface ready for charging, connect the battery charger's cables to the battery by matching positive to positive and negative to negative. When they have been secured, plug the charger into your electric supply.

How to charge a car battery?

1. The first step is disconnecting the battery from the car, or other vehicle or device. As an example, let's use a car battery. Disconnect the clamp on the negative terminal (black), then on the positive terminal (red). 2. Then, connect the charger clamps - the red clamp with a + symbol to the red terminal, and the black clamp to the negative one.

Can you put a charger on top of a battery?

Never leave the charger on top of the battery while it's in use. In fact, it's best to keep the charger as far away from the battery as the cables will allow. The charger will have familiar positive and negative terminals. Connect the charger's positive terminal to the battery's positive, and negative to negative. Then turn on the charger.

How do you connect a battery charger to the ground?

Connect the second charger clip to ground. There are two different cases for connecting the ground. If the battery has not been removed from the vehicle, connect the battery charger's grounding cable to a heavy-gauge metal part of the engine block or chassis.

How do I hook up my car's battery?
