# How to replace the battery power of the water boiler

How do I know if my boiler has no power?

If you still have no power to the boiler check the main fuse box has not tripped to the off position. If the fuse box has tripped, reset the fuse box and check you have power to the boiler. If you still have no power, Check if your isolation switch is a fused spur. If it has a fuse, try and change the fuse using a 3 amp rated fuse.

## How do I Reset my boiler?

Switch the boiler off at the boiler and isolate the main power switch, this will close the boiler down. Leave it in this mode for 10 seconds to reboot the boiler. Once completed, set the isolation switch and boiler to on, and press the reset button for 8 seconds now call for central heating or hot water.

## What should I do if my boiler is not working?

Check your circuit breaker. If a fuse has tripped, reset it. If the breaker trips again, there may be an electrical fault. Inspect the power socket. Plug another device into the socket to confirm it's working correctly. 2. Check the Gas Supply If your boiler isn't firing up, the problem could be a disrupted gas supply. Inspect other gas appliances.

## What happens if a boiler battery dies?

When the low batteries eventually die,you'll see a black display screen and the thermostat will stop working,meaning your heating system will go down as there is no temperature command being sent to your boiler. In order for thermostats and boilers to work, they need to be able to communicate well with each other.

### What happens if you have no power to your boiler?

If you've got no power to your boiler, you've probably lost access to heating and hot waterand are likely to be absolutely gutted. But never fear, Heatable's here to help guide you on how to get your boiler up and running again.

#### Should I Turn my boiler on or off?

Make sure your boiler is turned on at the appliance itself and at the mains. But I haven't turned my boiler off! It's still definitely worth a check- power cuts can often cause your boiler to switch off and not automatically come back on, or you may find that another member of the household has been fiddling with switches.

Ensure it's turned on and set to the desired temperature. Replace batteries if needed. A thermostat with low battery power might not communicate effectively with the boiler. Inspect the timer. Verify that the ...
