

How do I adjust the brightness of my solar street light?

For example, you can set the ST43 solar street light to provide full brightness at the first hour after sunset, and then reduce the brightness to 60% for the next period until dawn. You can also control the solar street light to keep 100% brightness for 4 hours after dark.

How to choose a solar energy street light?

Analyze the area size and choose suitable system brightness: pick a location that receives the maximum light exposure during the day, and if you live in a shady area, select systems with larger panels. Likewise, find out a suitable weather-resistance level for your solar energy street light.

How to control solar street light?

You can also control the solar street light to keep 100% brightness for 4 hours after dark. For the rest of the night, set the light keep full brightness when motion is detected, and reduce it to 30% when there is no presence is detected after 30s hold time.

How do I install a solar street light?

Connecting the Components: The solar panel, battery, and light fixture should be connected using the provided wiring and electrical components. Testing and Adjustments: Once the installation is complete, test the solar street light to ensure it is functioning properly and make any necessary adjustments to ensure optimal performance.

What is a solar street light?

The solar street light is a lighting system powered by electricity from batteries, which are charged with the use of solar panels. The solar panel consists of crystalline cells. The charge controller ensures the safety of the system, avoiding overcharging or discharging the battery.

How do you charge a solar Streetlight?

Some solar streetlight models require an initial battery charge before the light will operate. Refer to the manufacturer's instructions for charging procedures. It may involve connecting the battery to an external charger. Locate the light switch and turn it on. Observe the light operation for a few minutes.
