

Do batteries go bad if not used?

The answer usually depends on what type of battery you are talking about and what size it has. Additionally, taking proper care of these batteries will ensure that they last you a much longer time than they were intended to. Talking about this, one question that many people ask is "Do batteries go bad if not used".

Can a car battery go bad if left unused?

Yes, car batteries can go bad from sitting. If a battery is left unused for a long period of time, it will slowly lose its charge and eventually die. This is because the chemical reaction inside the battery that produces electricity gradually slows down when it's not being used. What happens if you let your car sit for years?

What happens if a battery is not used for a long time?

If battery is not empty and not used for long time - it will be fine. However batteries are not perfect and they slowly discharge without load. If you leave full battery for few months - it may self-discharge and when voltage drop to "almost empty voltage" - it will start degrading and loosing capacity.

Do lithium ion batteries go bad?

Lithium Ion batteries "go bad" when they are stored in discharged state. It is all about battery voltage. If voltage is too low - undesirable chemical reactions will happen and battery will degrade. If battery is not empty and not used for long time - it will be fine. However batteries are not perfect and they slowly discharge without load.

Do I need to charge a new battery before use?

If you are looking to purchase a new one, and the seller told you that you need to charge it first before use, please, do yourself a favor and move away from that store. This is usually an indicator that the battery is quite old, and the dealer knows for this, so they are suggesting charging it first.

Should I buy a new battery?

It's always a good idea to purchase as a newer battery as possible because as they stay at the dealer's shelves, they slowly discharging. As they are discharging and without being charged again, plates start to oxidize, making the battery lose its capacity.
