

What is capacitor ionic?

Capacitor is across-platform app runtime that makes it easy to build web apps that run natively on iOS, Android, Electron, and the web. Capacitor can work with any web project, it's not specific to Ionic apps.

Does capacitor work with Ionic apps?

Capacitor can work with any web project, it's not specific to Ionic apps. Capacitor provides a consistent, web-focused set of APIs that enable an app to stay as close to web-standards as possible, while accessing rich native device features on platforms that support them. It has full support for PWAs.

How can capacitor and ionic power the world's enterprise apps?

Capacitor and Ionic are using the power of the web to build, secure, and deliver enterprise-grade apps in less time. Ionic's ecosystem of enterprise-grade solutions is changing how app development is done in the enterprise. See how they are powering the world's enterprise apps.

Is capacitor a good ionic tool?

Fortunately for you, Capacitor is perfectly capable of being used solo without any other Ionic tooling. After seeing the benefits, it's time for you to introduce your team to Capacitor and build your next production app. Choosing a new technology for a team can be a huge business decision.

What is capacitor & how do I use it?

A cross-platform native runtime for web apps. Capacitor is an open source native runtime for building Web Native apps. Create cross-platform iOS, Android, and Progressive Web Apps with JavaScript, HTML, and CSS. Get started easily. Install the native platforms you want to target. Access core Native APIs or extend with your own.

Does capacitor work with any web app?

While Capacitor was started and is (currently) mainly built by Ionic staff, it is an Open Source project built on the philosophy to work with any web app - not just ones built with Ionic. Any web app that has an index.html file as its entry point can be packaged with Capacitor.

For example, the UI of an Ionic app runs in a browser - called a WebView - that is invisible to the user. By default, Ionic apps run on Capacitor, the cross-platform native runtime that we mentioned above. But unlike using Capacitor out-of-the-box, Ionic provides a highly opinionated way to build mobile apps with the web.

Discover the ultimate guide to selecting the perfect capacitor plugin for your Ionic project, ensuring optimal performance and compatibility.

Build cross-platform apps from a shared codebase using Ionic Capacitor and develop applications that work

seamlessly across iOS and Android.

You can use `@capacitor/storage` to store non-relational data and `@ionic/storage` if you need the data to be
stored in an SQLite database. Not sure how your app is set up, but I'd assume it looks something like this:
Your application reads data in from `@ionic/storage`. This data is stored locally on your device.
