

What are as-built rooftop solar drawings?

As-built Rooftop Solar Drawings provide a record of how the system was actually installed. To produce the as-built drawings we require either the hand sketch of the changes made during the installations or photographs so that we can amend the original Rooftop Solar Drawings.

What are the roof requirements for solar?

In most cases, as long as your roof is structurally sound and has enough sun-facing surface area to fit the number of panels your home needs, your roof will be sufficient to install solar panels.

Who can install and maintain in-roof solar modules?

Installation and maintenance of in-roof solar modules may only be carried out by trained personnel. If you require further information, contact your supplier or local Wienerberger representative. Please ensure both the installer and owner of the PV system have access to this installation guide for future reference.

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

What is in-roof solar integrated roof tile installation manual?

In-roof Solar Integrated Roof Tile Installation Manual 1. INTRODUCTION In-roof solar modules consist of a series of electrically interconnected crystalline silicon solar cells, which are permanently encapsulated between a tempered glass superstrate and substrate.

How to install a second in-roof solar panel?

Connect to the first panel before laying the second In-roof Solar, paying attention to wiring string design. Panel marked with 'M' on label to rear (1-2) should be used in the middle section only. Note that when the end of the row is reached, the rightmost module must be panel marked with 'R' on label to rear (1-3).
