A Valve-Regulated Lead-Acid (VRLA) Battery is a lead-acid battery designed to immobilize the electrolyte, enabling the recombination of hydrogen and oxygen. Also known as a sealed lead-acid battery, it boasts a compact size, excellent sealing properties, no water replenishment requirement, and minimal gas emission.

Valve-regulated lead-acid (VRLA) technology encompasses both gelled electrolyte and absorbed glass mat (AGM) batteries. Both types are valve-regulated and have significant advantages over flooded lead-acid products. More than a decade ago, East Penn began building valve-regulated batteries using tried and true technology backed by more than
