

How to optimize lithium-ion battery charging?

When exploring optimization strategies for lithium-ion battery charging, it is crucial to thoroughly consider various factors related to battery application characteristics, including temperature management, charging efficiency, energy consumption control, and charging capacity, which are pivotal aspects.

How can lithium-ion batteries improve battery performance?

The expanding use of lithium-ion batteries in electric vehicles and other industries has accelerated the need for new efficient charging strategies to enhance the speed and reliability of the charging process without decaying battery performance indices.

What factors governing Li-ion battery charger design?

The particular charging algorithm, charging protection, board space, and complexity are the decisive factors governing Li-ION battery charger design. Figure 1 shows the typical charging profile of Li-ION batteries. There are three charging phases: precharge, fast-charge/constant current, and constant voltage.

Can cylindrical lithium-ion batteries be charged with feedback-based charging protocols?

It is also shown that both cylindrical and prismatic lithium-ion batteries can be charged with BC feedback-based charging protocols. In various applications, feedback-based charging protocols have been attempted using historical experimental data.

Are lithium-ion batteries fast charging?

Since the 1990s, the widespread adoption of lithium-ion batteries has shifted the industry's focus towards high safety, reliability, and fast charging strategies. A range of distinct charging strategies have been suggested and are continuously developing to address the diverse fast charging demands of LIBs in various application scenarios.

Does a 4SCC charging strategy affect lithium-ion batteries?

As shown in Fig. 10 (b), the 4SCC charging strategy by Lee et al. results in a sharp temperature increase during Stages S1 and S2, which could lead to battery aging, capacity degradation, and a shortened lifespan of lithium-ion batteries.
