

What is a battery lease scheme?

How does a battery lease work?

Some vehicles are sold with their battery included, and for some the battery will have to be leased. You own the car itself, but not the battery pack inside it.

Battery lease vehicles are an affordable way to buy an electric vehicle and for some, maybe the only way to get into an EV. With used battery lease vehicles costing £3,000-£6,000 cheaper than battery owned models, it makes them more accessible or maybe you can afford to have a newer vehicle that is still covered by the manufacturer's warranty.
