

What is a custom battery pack configuration?

Custom battery pack configurations describe how individual cells are connected together to create a complete battery pack. The environment in which the battery pack is used and the electrical connection of the individual cells (series or parallel) are two key considerations when designing a battery pack and working out the best configuration.

What are the different types of battery packs?

General types: Serial - Increases voltage Parallel - Increases capacity Serial /Parallel- A combination of both Custom battery pack configurations describe how individual cells are connected together to create a complete battery pack.

What is a lithium ion battery?

The term lithium-ion battery refers to an entire family of battery chemistries. The common properties of these chemistries are that the negative and the positive electrode materials serve as hosts for lithium ions and that the battery contains a non-aqueous electrolyte.

How do I choose a battery pack?

The types of battery, the number of cells, the shape of the pack, and the components of the pack will be determined by the voltage and load current of the device being powered. Other considerations will be available space, operating temperature, usage conditions, transportation requirements, and charge/discharge specifications.

What is a rechargeable lithium battery?

The second type of rechargeable lithium battery is called a lithium ion battery, which has a negative terminal that consists of a carbon-based material, usually graphite, or another type of alloy or material that permits interrelation, i.e. storage, of lithium in the structure.

Are Li-ion batteries still a viable alternative to lithium batteries?

Today, Li-ion batteries have completely taken over the computer and mobile phone battery markets, though portable NiMH batteries are expected to remain on the market as a low-cost alternative to lithium batteries.
