

Does science contribute to knowledge flow in the lithium-ion battery domain?

Based on the "paper-patent knowledge genetic model," using the network reconstruction method and establishing relevant indexes, this study reveals the relationship between the knowledge contribution from science to technology and the process of knowledge flow in the lithium-ion battery domain.

Are lithium-ion batteries a good energy storage device?

Lithium-ion batteries (LIBs) are widely regarded as established energy storage devices owing to their high energy density, extended cycling life, and rapid charging capabilities.

How should lithium-ion batteries be stored?

Foundations for lithium-ion batteries The scale of use and storage of lithium-ion batteries will vary considerably from site to site. Fire safety controls and protection measures should be commensurate with the way batteries are used, charged, or stored: Only use batteries purchased from a reputable manufacturer or supplier. Do not leave/store batteries i

How does science contribute to technology in lithium-ion batteries?

Hence, understanding how science contributes to technology in lithium-ion batteries can provide innovative references in the lithium-ion battery domain, such as the technical value evaluation of papers and patent reference collection. These could help researchers make better use of scientific knowledge.

Are lithium-ion batteries a hotspot in the energy storage field?

To conclude, lithium-ion batteries' scientific and technological innovation is a hotspot in the energy storage field. Scientific knowledge has a significant effect on technology innovation in the knowledge-intensive industry like lithium-ion batteries.

Does the lithium-ion battery domain carry important information?

The total knowledge contribution range of science to technology is twice the direct knowledge contribution range, and the total knowledge contribution strength is five times the direct knowledge contribution strength. This shows that indirect knowledge flows in the lithium-ion battery domain carry important information.

To understand how science promotes technology development in the lithium-ion battery industry chain, this study reveals the knowledge contributions of research topics from science and technology. Using topic modeling, the topics in papers and patents about lithium-ion batteries are mined and classified into different links in the industry chain.
