

New Energy Battery Exchange Price List Picture

How much does a lithium ion battery cost in 2023?

In 2023, lithium-ion battery pack prices reached a record low of \$139 per kWh, marking a significant decline from previous years. This price reduction represents a 14% drop from the previous year's average of over \$160 per kWh.

Why are lithium-ion batteries so expensive?

The cost of raw materials, particularly lithium carbonate, plays a significant role in the pricing of lithium-ion batteries. The recent decrease in lithium prices has been a major factor in lowering battery costs. As lithium is a key component in these batteries, fluctuations in its price directly impact the overall cost of battery production.

How will Lithium prices affect EV battery prices in 2023?

Effect on Battery Prices: The decrease in lithium prices is expected to further lower the prices of lithium-ion batteries, continuing the trend observed in 2023. In June 2024, the average prices for EV battery cells saw a decrease: Square Ternary Cells: Priced at CNY 0.49 per Wh, down 2.2% from May.

What is the difference between lithium ion battery prices and nickel prices?

Data until March 2023. Lithium-ion battery prices (including the pack and cell) represent the global volume-weighted average across all sectors. Nickel prices are based on the London Metal Exchange, used here as a proxy for global pricing, although most nickel trade takes place through direct contracts between producers and consumers.

What happened to EV battery prices in June 2024?

In June 2024, the average prices for EV battery cells saw a decrease: Square Ternary Cells: Priced at CNY 0.49 per Wh, down 2.2% from May. Square LFP Cells: Priced at CNY 0.42 per Wh, down 2.6% from May. The reduction in prices for these battery cells highlights the ongoing price competition in the EV market.

Are lithium-ion batteries on a downward trend?

The price of lithium-ion batteries has been on a downward trend, reaching a record low of \$139 per kWh in 2023 and continuing to decrease into 2024. The reduction in lithium prices, increased production capacity, and technological advancements have all contributed to this trend.
