include: > those authorised as retailers under the Retail Law > those exempt from the requirement to be authorised⁴ > those offering energy products and services beyond the scope of the Retail Law - such as energy management services, solar and storage products and off ...

Electricity companies have to switch from integrated vertical mechanisms to open market systems for a variety of reasons. The concept of operating systems has changed as a result of the reorganization and deregulation of the electrical sector [1]. The traditional approach was to meet the entire power demand at any given time [2, 3], but the new philosophy ...

A fundamental requirement of competitive and efficient electricity markets is access to reliable data and performance metrics. This Electricity Market Information website (EMI) is the Electricity Authority's avenue for publishing data, market performance metrics, and analytical tools to facilitate effective decision-making within the New Zealand electricity industry.
