

Can long duration electricity storage help decarbonise our energy system?

We're consulting on the policy framework to enable investment in long duration electricity storage. Long duration electricity storage can provide an important contribution to decarbonising our energy system. For example, it can store renewable power and discharge it during periods of low wind.

How do I contact OFGEM about the long duration electricity storage cap?

If you're interested in the FAQ document from this webinar, please email LDES@ofgem.gov.uk. If you would like to speak to someone at Ofgem about our work on the Long Duration Electricity Storage cap and floor regime, please email LDES@ofgem.gov.uk.

What changes will the SMART plan make to electricity storage?

No changes, the market and environment stay exactly as it is. No specific changes for large-scale, long duration electricity storage. This means implementing the changes in the smart plan, such as innovation funding, and individual changes to remove market barriers for all types of storage.

Can long duration electricity storage save energy?

Long Duration Electricity Storage would reduce costs to consumers through lowering their energy bills, by avoided electricity grid reinforcement and avoided peak generational plant build. LCP's modelling estimates savings for the energy system (and ultimately the energy consumer) of up to £24 billion by 2050.

What is the 'cap and floor' regime for long duration electricity storage (LDEs)?

Ofgem is the regulator for Long Duration Electricity Storage and oversees implementation of a 'cap and floor' regime for LDES projects, proposed by the Department for Energy Security and Net Zero (DESNZ). The aim of this regime is to stimulate investment in Long Duration Electricity Storage projects.

What is long duration electricity storage (LDEs)?

Long duration electricity storage (LDES) will be pivotal in delivering a smart and flexible energy system that can integrate high volumes of low carbon power, heat, and transport.

Long Duration Electricity Storage Smart Energy Department for Energy Security and Net Zero . 7 th Floor . 3-8 Whitehall Place, London . SW1A 2EG . Tel: Email: smartenergy@energysecurity.gov.uk. Consultation reference: Long duration electricity storage consultation: Designing a policy framework to enable investment in long duration electricity ...

To promote low-carbon power system development, our country is increasing new energy grid integration. However, the uncertainty of new energy output brings significant pressure to the stable operation of the power grid, where the large-scale accommodation of new energy has always been a global challenge. As an important pillar of the stability of the new power system, ...

energy storage projects, which make up 34% of the current projects in the connections queue. To deliver this, we have improved our modelling assumptions to better reflect the system impact of battery energy storage systems (BESS). In addition, we are improving our connection arrangements for storage projects which is covered in this policy update.

The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU's ...

Documents Clean Power 2030 Action Plan: A new era of clean electricity - main report ... to maintain a secure and affordable energy supply in an increasingly unstable world; to create new ...

The government therefore committed in the British Energy Security Strategy (BESS) to encouraging all forms of flexibility with sufficient large-scale, long duration electricity storage to...

China | Policy | This document identifies energy storage as a key element of the decarbonisation of the sector and support energy security. It promotes the high-quality and large-scale development of new energy storage in order to accelerate the construction of a clean, low-carbon, safe and efficient energy system. It seeks to advance knowledge and capacity in a range of ...

1.4.1 This NPS, together with EN-1, is the primary decision-making policy document for the Secretary of State on nationally significant onshore renewable electricity ...

Strategy and Policy Statement for Energy: Policy Summary of Responses . 6 . 1. Executive Summary . This document summarises the responses received through the government's consultation on the draft Strategy and Policy Statement (SPS) for Energy policy in Great Britain and how government has responded to the consultation.

On 15 July, national plans for energy storage were set out by the Chinese National Development and Reform Commission and National Energy Administration. The main goals of new energy storage development include: Large-scale development by 2025; Full market development by 2030. The guidance covers four aspects: 1) Strengthening planning guidance ...

This includes lithium-ion battery storage and pumped hydro storage as well as emerging technologies including liquid air energy storage and flow batteries. The Government is committed to removing barriers to the deployment of electricity storage at all scales as outlined in the 2021 Smart Systems and Flexibility Plan.
