

Pakistan's policy document on energy storage subsidies

What are Pakistan's energy reforms?

As part of its energy sector reforms, the Government of Pakistan plans to reduce spending on electricity subsidies to 0.3-0.4 percent of GDP by mid-2016. The reforms will alleviate a major constraint on the government's budget.

What is the energy policy of Pakistan?

Pakistan adopted a new energy policy in 2015, resulting in the establishment of 13 additional independent power producers, the majority of which are Chinese. Additionally, a transmission policy was announced to spur private sector development of transmission lines. As of 2018, Pakistan had more than 40 IPPs operating.

Does Pakistan have a good fuel subsidy policy?

In Pakistan, the federal government grants millions of rupees as subsidies to maintain fuel prices and provide relief to the common man. However, the country still lacks a consistent policy for the provision of fuel subsidies. Asian countries like China, India, Bangladesh, Indonesia, and Malaysia have proper subsidy tools and management systems.

How many electricity subsidies does Pakistan provide?

1. The Government of Pakistan provides several subsidies to electricity consumers; in 2012-13 (FY 13), these collectively amounted to 1.5 percent of GDP (Figure 1). By far the largest is the Tariff Differential Subsidy (TDS), which comprised 96 percent of electricity subsidies in FY 13.

Is there a proper system to implement subsidies in Pakistan?

Unfortunately, there is no proper system to implement subsidies properly in Pakistan. There is a big reason behind it: that subsidies are not just for farmers' different kinds of sectors, and industries also enjoy the subsidies because of lack of proper system and still implementation on an old and poor system.

How will a subsidy removal impact the world oil market?

Simultaneously, favorable trends in the world oil market predicted for FY 14 and FY 15 will help to attenuate the inflationary impact of subsidy removal. Energy intensive sectors are predicted to be the most affected by rising electricity prices. On the consumer side, two effects are predicted.
