Can Kapton be used in flexible perovskite solar cells?

The results of this study show that while reduced light absorption leads a decrease in J SC,Kapton's thermal stability and the capacity modification of its ETL layer cause other cell efficiency parameters to increase. It means that Kapton could potentiallybe used in flexible perovskite solar cells as a substrate.

Can perovskite materials be used in next generation solar cells?

The rapid progress in both device efficiency 2,3,4,5,6,7,8 and stability 9,10,11 indicates the potential application of perovskite materials in next generation solar cells. There are two device architectures currently dominating in the field of perovskite solar cells (pero-SCs): mesoporous type and planar heterojunction.
