What is home energy storage?

Home energy storage involves using a system to store energy for later use. You can store different types of energy, for example heat, but the most common type of home energy storage system uses a battery to store electricity. This article will concentrate on this type.

What is a home battery energy storage system?

The idea with a home battery energy storage system is that you'll be able to charge it up using either your own electricity generated from solar panels or from cheap energy acquired from the grid. Once stored, you'll use this lower cost stored energy to power appliances in your home.

Why is home energy storage so popular in the UK?

With energy bills soaring and people getting tired of relying on fossil fuels, home energy storage is experiencing a growth in popularity in the UK. These storage systems, most likely in the form of lithium-ion batteries, are also becoming an important component in enabling our transition to cleaner, greener energy.

Can energy storage be a smart energy management system?

Many smart storage systems allow you to keep track of your energy use online and charge the batteries with low rate electricity from the grid if you're on a tariff that is cheaper at certain times of day, such as Economy 7. We're starting to see energy storage playing a role in smart energy management at grid level.

How do energy storage systems work?

Energy storage systems let you capture heat or electricity when it's readily available. This kind of readily available energy is typically renewable energy. By storing it to use later, you make more use of renewable energy sources and are less reliant on fossil fuels. Let's look at how they work and what the different types of energy storage are.

How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and stored in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.
