

What is a battery simulator?

Battery simulators replace the vehicle battery in the test environment. These sources must fulfill various criteria concerning power rating, voltage, fast slew rate, very low impedance, low noise, etc. depending on the particular application. Pulse 2b, pulse 4, sine wave noise and other complex simulations are all supported.

Are Em test and Teseq battery simulators right for You?

Offering EMC-focused combinations of features that exist in no other battery simulator, EM Test and Teseq brand battery simulators are the right solution for your EMC needs. Four-quadrant battery simulators provide not only bipolar voltage, but also provide positive and accept negative current from the DUT.

What is the difference between a two-quadrant battery simulator & a four-quarter battery simulator?

Four-quadrant battery simulators provide not only bipolar voltage, but also provide positive and accept negative current from the DUT. This acts more like the actual battery in the vehicle, and will discharge any capac... Two-quadrant have similar performance to the four-quadrant battery simulators but can provide only positive voltage.
