

Will my solar filter fit my binoculars?

Our solar filters need something to grip and there needs to be enough space between the lenses to accommodate 2 filter frames. Generally, it means conventional mid/large size binoculars. If you have compact or "image stabilized" binoculars, chances are there is NOT a ready-made filter that will fit.

How do you measure a solar filter on a telescope?

Simply input the model of the telescope you plan on using to find out which solar filters will fit properly. Grab a tape measure, yardstick, ruler, or caliper that can fully fit over the front of your scope. Place it over the front of your scope, and select one point along the edge to measure from.

Do I need a 6*** SF filter for my Telescope?

If your telescope has accessories that will interfere with the fit of this particular filter, you must purchase the 6***-SF version of our filters. NOTE: To ensure proper fit of the solar filter you must measure the outside diameter of the front opening of the telescope, binoculars or lens.

Can a larger filter fit a smaller tube diameter?

A larger filter can be made to fit a smaller tube diameter, BUT a smaller filter cannot be made to fit a larger tube diameter. - Longer nylon thumb-screws are commonly stocked at most hardware retail stores. Most of our filters use #8-32 (diameter and thread-pitch), and some models use #10-32.

What is the OD of a Dobsonian solar filter?

In this example, the OD is 4 9/16". For a Dobsonian, measure from here to here. In this example, the OD is 9 1/4". If you're using a measuring instrument that is in Imperial units (inches), you'll want to convert this to millimeters as this is what most all solar filter specs are listed in.

Do solar filters have a built in Sun finder?

Solar Filters with built in sun finder! The new design has a built in sun finder making centering the sun in your eyepiece very easy. The finder target is visible from both the front and back sides of the filter making centering the sun easy from either end of the telescope.

I'm looking to grab a solar filter for a 4" f/6.5 achro I've got sitting around, and I'm pretty set on a Baader, but I'm struggling to choose which one. Ideally, I'd get the ASTF 100, ...

Due to glare, the angular size of the sun appears much bigger than it actually is. A proper solar filter can be used to remove the glare and reveal the sun"...

Measure the outer diameter (in millimeters) of your telescope's dew shield (front opening) very carefully like in the example image above. Then select a filter with an inner diameter that is the same as your dew shield or

tube's outer diameter ...
