

What is the best angle for solar panels in the UK?

The best all-year-round angle for PV (photovoltaic) solar panels in the UK is 35-40 degrees. The best angle for each region within the UK will vary slightly within this. For seasonal changes, the best angle for summertime is 20 degrees and 50 degrees in winter. See below for the optimum angle for each UK region.

Should solar panels be tilted?

The tilt angle of the solar panels plays a significant role in your system's optimal energy production. Solar panel installation in the UK will benefit from angles tilted at 40°; more than it would from flat panels. The optimal angle depends on the latitude, and additional seasonal adjustments can be beneficial.

Should I set my solar panels at a fixed angle?

The general guideline is to add 15 degrees to your latitude during winter and subtract 15 degrees from your latitude during summer. As already mentioned, while these seasonal adjustments can optimise energy production, we recommend setting your panels at a fixed angle year-round for ease and practicality.

What angle should a solar panel be positioned at?

Conversely, in winter, when the sun's path is lower, a steeper angle of around 50 degrees is recommended to capture the most sunlight possible from the lower-positioned sun. These seasonal variations mean that the optimal angle for solar panels changes throughout the year.

What is a solar panel angle & performance chart?

The image shows a solar panel angle and performance chart. It illustrates how the tilt angle and the orientation of the solar panel affect its energy output. The chart has the following labels: Tilt angle: The angle between the solar panel and the horizontal plane. The optimal tilt angle depends on the latitude and the season of the location.

Do solar panels need to be tilted during the summer solstice?

As the Earth tilts on its axis, the sun's position in the sky waltzes through the seasons, prompting a need for seasonal adjustments to your solar panel angle. During the summer solstice, the sun graces us with its high arc across the sky, calling for a lower tilt to your panels.
