

Are ground-mounted solar panels right for my home?

We'll go over the details to help you decide if they're right for your home. Ground-mounted solar panels operate like a typical rooftop system but are generally more efficient. Ground-mounted solar panel installations cost about \$42,140 after the federal tax credit.

How to install ground-mounted solar panels?

When you decide to have ground-mounted solar, you have two options on how to install them on the ground. The panels can get attached with a pole mounted system or a standard mount. Standard ground mount solar systems are mounted like rooftop solar in that the solar panels get attached to a metal frame.

Why should you choose a ground-mounted solar system?

With a ground-mounted system, you can choose the orientation of your solar panels to increase energy production. Ground-mounted systems also tend to operate more efficiently because they have more air circulation beneath the panels, allowing them to stay cool. It's easy to maintain ground-mounted solar panels.

Is a ground-mounted solar system better than a rooftop solar system?

A ground-mounted system with a tracker can be 10% to 45% more efficient than a rooftop solar system. The larger height of ground-mounted panels means they are better suited for bifacial panels, which have solar cells on the back of the panels that capture light reflected off the ground or other hard surface.

What are ground-mounted solar panels?

While many people think of solar panels as something you put on the roof, there's another option that's gaining popularity: ground-mounted solar panels. These are solar panels installed on the ground, rather than on a rooftop. But why choose ground-mounted panels? Well, they come with their own set of advantages.

How do fixed ground-mounted solar panels work?

Fixed ground-mounted solar panels can be installed directly in your yard, usually in a flat and level position. They are typically attached to a metal frame that is anchored into the ground to provide stability. The panels are angled to face the sun for optimal energy production but remain in that fixed position and cannot be adjusted.
