

Do solar charge controllers run off DC input?

It has since occurred to me that "solar" charge controllers, of which small 10-30 amp versions are in abundance, run off DC input anyway. Is there anything wrong with feeding any typical charge controller intended for solar panel input with mains power via an ordinary DC power supply like you'd find on, say, any amateur radio operator's desk?

Should I use a 12V solar charger?

Some of the solar chargers are very good, with equalisation cycles and more. I can't immediately think of any disadvantage of doing this. 12V solar chargers are designed to take  $V_{in}$  of at least 18V and probably 20V+. If you get one with "proper" MPPT it will probably allow you to get maximum charge out of a given voltage source.

Should I use a solar charger parallel to my solar installation?

If you use the charger in parallel to your solar installation, you may not harvest the maximum energy you could, but on the other side you will preserve your battery. So it's your choice: harvest more or get a longer battery life. You must log in or register to reply here.

Can you have multiple Chargers connected to a battery bank?

There's no problem having multiple chargers (and types) connected to the battery bank. They each are self regulating, and will taper off as the battery voltage increases. One charger will also not back flow into the other. But leaving the charger connected and powered up means any battery energy used, will be replaced by grid power.

Does a gopower PWM solar charge controller work at night?

I've watched my GoPower PWM solar charge controller as the on-board generator comes online and powers the 55 watt converter. The amps that the GoPower produces goes to zero. So it plays well with the rest of the system. You would probably be better off by re-charging your batteries during the night, if they fall below a given threshold.

Should I re-charge my solar battery at night?

You would probably be better off by re-charging your batteries during the night, if they fall below a given threshold. If you use the charger in parallel to your solar installation, you may not harvest the maximum energy you could, but on the other side you will preserve your battery. So it's your choice: harvest more or get a longer battery life.

Is there any reason a power source other than from a solar panel shouldn't be used as the power input to a MPPT charge controller for charging a battery, assuming the ...

My charger controller is the EPEVER 40A MPPT Solar Charge Controller and is hooked up to 4 100 W panels wired in parallel (on a sunny day I can get 15+ AMPs at 12 volts) ...

If you use the charger in parallel to your solar installation, you may not harvest the maximum energy you could, but on the other side you will ...

USB Type C connector with 5.1k CC resistors so it will work with any computer or power supply to get 5V and up to 1A. Data lines available if needed, on the bottom breakout. Separate DC or ...

The Solar Powered USB Power Supply and Charger consists of a Solar panel, a power converter, a standard USB cable, a USB charging cable, and an Apple Charging Adapter as shown in the ...

Learn how to connect a battery to a solar panel and take control of your energy costs. This comprehensive guide covers the essential components, safety precautions, and a ...

No need to turn off solar or the charger while driving and charging through the DC-DC charger. These all can operate together or separate depending on which have a power source to charge. BMS is the last stand of ...

No sun, no solar power to run these devices. Second, solar panel performance will dip when it's overcast or raining. If it rains for several days or winter sets in, solar panels won't be as ...

Benefits of solar-battery systems: Enjoy greater energy independence, a reliable power supply, increased efficiency, environmental benefits, and potential cost savings ...

I use a Victron 75/15 with a AC power DC power supply at 24V, attached to the solar input, to charge my 12V banks - have done for years - essentially works as a DC/DC ...

Choosing the Right Cables: Select cables based on ampacity and length to minimize voltage drop. For example, use 10 AWG wire for runs up to 30 feet when dealing with ...
