In this paper, an overview of the solar cell technology based on silicon for applications in space is presented. First, the space environment and its effects on the basis of ...

In this work, a detailed analysis focused on the identification of series resistance ( $R_s$ ) is presented. This analysis is applied to four solar cell fabrication processes developed at ...

Among the physical parameters of the standard single diode model of a solar cell, series resistance is one of those that strongly affects its performance. Contradictory changes in ...

Our findings show that recombination resistance can be accurately identified, regardless of the underlying recombination mechanism, in the solar cells with unhindered ...
