

What is solar thermal energy?

Solar thermal energy (STE) is a form of energy and a technology for harnessing solar energy to generate thermal energy for use in industry, and in the residential and commercial sectors. Solar thermal collectors are classified by the United States Energy Information Administration as low-, medium-, or high-temperature collectors.

What is solar thermal technology?

Solar thermal technology (sometimes called solar water heating) harnesses this powerful, clean, inexhaustible and free resource by converting energy from the sun into hot water for buildings of all types. It is also ideal for businesses and organisations wanting to reduce their carbon emissions and protect themselves from sky-rocketing fuel costs.

What is the difference between solar thermal energy and photovoltaic solar energy?

The difference between solar thermal energy and photovoltaic solar energy is the way the energy is used. Solar thermal energy generates thermal energy and photovoltaic electricity. Solar thermal energy is used to produce domestic hot water that accumulates in water tanks in low- temperature facilities.

How is solar thermal energy obtained?

Solar thermal energy is obtained by converting solar heat into useful energy. This is achieved through various technologies. Parabolic solar collectors use curved reflective mirrors to concentrate sunlight onto a receiver containing a thermal fluid. The heat generated is used to produce steam and generate electricity.

How does solar thermal work?

Instead of converting sunlight directly into electricity, as photovoltaics does, solar thermal harnesses the sun's energy to heat a fluid called a heat carrier and then uses that heat to generate electricity or provide heat for industrial or domestic applications.

Where did solar thermal technology come from?

On this page we provide some information on the various pages contained in the Solar Thermal section. It is thought that this technology was first invented in 1896 in the United States of America. Simple painted boxes of water that trapped the sun's heat energy for use in domestic baths seems to be its origin.
