

The impact of losses on capacitor components

What are capacitor losses?

Capacitor Losses (ESR, IMP, DF, Q), Series or Parallel Eq. Circuit ? This article explains capacitor losses (ESR, Impedance IMP, Dissipation Factor DF/ tand, Quality FactorQ) as the other basic key parameter of capacitors apart of capacitance, insulation resistance and DCL leakage current. There are two types of losses:

What happens if a capacitor loses power?

Excess losses can cause the dielectric to heat leading to thermal breakdown and capacitor failure. In ceramic capacitors, dielectric losses are predominant at low frequencies. At high frequencies, these losses diminish and their contribution to the overall ESR is negligible. Metal losses comprise of ohmic resistance losses and skin effect.

What is a low loss capacitor?

Unlike dielectric losses, metal losses are predominant at high frequencies. High ESR values can lead to excessive power loss and shortened battery life. Using low loss capacitors in coupling and bypassing applications helps to extend the battery life of portable electronic devices.

What is the loss factor of a ceramic capacitor?

The loss factor varies from one dielectric material to another. Excess losses can cause the dielectric to heat leading to thermal breakdown and capacitor failure. In ceramic capacitors, dielectric losses are predominant at low frequencies. At high frequencies, these losses diminish and their contribution to the overall ESR is negligible.

Why does a film capacitor loss have a linear characteristic?

A film capacitor loss has a linear characteristic for the current amplitudes of each frequency component because the equivalent series resistance (ESR) value is almost constant from 5kHz to 50kHz[7 A capacitor loss analyzer system used for power electronics converters is presented.

Can a capacitor loss measurement system be used for power electronics converters?

In this study, a capacitor loss measurement system for power electronics converters is proposed. The proposed measurement system can be used for fast capacitor loss measurement with high accuracy in a real circuit and capacitor loss analysis for each switching period of power electronics converters.
