

Why do tower cranes need a revolution battery?

"Revolution Battery not only saves on natural resources, but also allows the heaviest tower cranes in the country to be powered from only a small mains supply." By having the battery plugged into the mains, it stores sufficient energy for the needs of regular construction sites and provides the power required when demand peaks.

Will a new battery reduce costs and carbon on construction sites?

11 Sep Falcon Tower Cranes is the first customer for a new battery that promises to reduce costs and carbon on construction sites. Dumarey Green Power, formerly Punch Flybrid - the company that brought flywheel technology to UK construction sites - has developed a new battery energy storage system.

Does Falcon Tower cranes have a voltpack battery system?

Falcon Tower Cranes has already been a customer of Dumarey's flywheel system and also has Voltpack battery energy storage systems from Northvolt in its fleet. Falcon is sold on Dumarey's concept and has committed to buying however many Revolution batteries that Dumarey Green Power can produce this year.

Who makes a battery energy storage system?

Dumarey Green Power is not the only British-based manufacturer of battery energy storage systems. Green Power Hire, acquired by Speedy Hire last October for £20.2m, also manufactures in the UK.

Its powerful built-in rechargeable battery delivers 35 minutes of continuous run time from a single 4 hour charge for hassle-free cleaning. Use as a cordless vacuum for carpets and hard floors, a detachable handheld for cars, stairs and upholstery or extend the pole for higher hard-to-reach areas like ceilings and curtains.

Hackness Martello Tower & Battery. Scotland, Europe. Orkney. Login Save . Built during the Napoleonic Wars, when French ships passed through the Pentland Firth to prey on North Sea merchant vessels, this battery, accompanied by two towers (one across the water), never saw action but is an impressive piece of military architecture. The custodian ...

A battery can be a reliable and more sustainable energy source for powering tower cranes. This setup allows the generator to run more efficiently, reducing fuel consumption and emissions.
