How much solar capacity will China add in 2024?

The maximum amount of solar capacity, in gigawatts (GW), that China could add in 2024, according to a presentation by China Photovoltaic Industry Association (CPIA) honorary chairman Wang Bohua. (Total solar capacity in the EU stood at 200GW at the end of 2022.)

#### What does GWR 2024 mean for China?

The 2024 Government Work Report(GWR 2024) delivered by China's Premier Li Qiang together with the broader events of the Two Sessions,however,provide important insights into China's approach to economic,social,political,and foreign policy agendas and the development path ahead.

### How much power does China have in 2023?

In June 2023, China's total installed capacity of wind, solar and hydropower exceeded 1.3 billion kilowatts, historically exceeding the installed capacity of coal power. By the end of 2023, more than half of the world's electric vehicles were being driven in China, with the total number reaching 20 million.

#### What is a two sessions report?

The report is the central part of China's "Two Sessions" meetings. Delivered by the premier, it outlines government achievements from the past year and sets goals and directions for the coming year. It is also usually when the country's GDP growth target for the year is announced. What are the Two Sessions?

## What does the 2024 GWR mean for green manufacturing?

Specifically, the 2024 GWR provided some more guidance on green manufacturing such as consolidating the industry of new-energy vehicles and developing hydrogen power, while emphasising the imperative for traditional industries to enhance productivity and efficiency to maintain competitiveness.

#### What is the GWR target for 2024?

The 2024 GWR set a target of reducing energy intensity by approximately 2.5 per centfor 2024. This is slightly higher than the 2 per cent target in 2023 (which was not met, as the energy intensity in 2023 increased), but lower than the annual reduction of 3.3 per cent 1 2009 to 2019.
