

Why is Ukraine investing EUR140 million in energy storage?

The EUR140 million total investment aims to enhance power grid stability, bolstering Ukraine's energy security and independence. The project will be the biggest operational energy storage portfolio in Eastern Europe at the time of commissioning.

Where is the first energy storage system in Ukraine?

The first energy storage system in Ukraine, with a capacity of 1 MW and a capacity of 2.25 MW/h, was commissioned in May 2021 by the DTEK Company in the city of Enerгодар on the territory of the Zaporizhzhia TPP, which is currently under Russian occupation. Plans for the construction of an additional 50 MW storage system were also announced.

What happened to Ukraine's energy sector in 2022?

In 2022, Ukraine's power sector experienced significant legislative and regulatory shifts, including the introduction of energy storage systems, adjustments to feed-in tariffs, virtual PPAs, strategic energy planning for 2050, and a focus on renewable gas development in partnership with the European Commission.

How many energy storage plants are there in Ukraine?

The six energy storage plants will be located at multiple sites across Ukraine, with capacities ranging from 20 MW to 50 MW and a total capacity of 200 MW. Together, they will store up to 400 MWh of electricity - enough to supply two hours of power to 600,000 homes (equivalent to roughly half the households in Kyiv).

How has Russia impacted Ukraine's energy sector?

The full-scale Russian invasion of Ukraine has brought unprecedented challenges to its energy sector, exacerbating existing technical, legal, and economic difficulties.

What is Ukraine's energy strategy?

Still, the adopted Energy Strategy is a document reflecting the existing international obligations undertaken by Ukraine, forming the path for future development. It has to become fully clear and comprehensive and be properly presented to the expert community and the public.
