

What can be used to replace the battery of the hair dryer

Can a hair dryer heat a battery?

Never heat a battery directly. If you're heating adhesive near or underneath a battery, make sure you've completely discharged the battery before applying heat. The next four steps show how to use the hair dryer to soften strong adhesives, such as screen and frame adhesives. Place your device on a clean, heat resistant surface or mat.

What should I do if my hair dryer has a swollen battery?

If you have a swollen battery, take appropriate precautions. Keep the hair dryer switched off and unplugged when not in use. Avoid using extension cords to power your hair dryer. Since hair dryers require a high current draw, cheaper or old extension cords pose a greater fire risk. Never heat a battery directly.

How do you fix a broken hair dryer?

Position the nozzle of your hair dryer 2-3 inches above the device. Move the hair dryer along the surface of your device. Never leave your hair dryer in one spot for an extended period of time. Heat the surface until it's hot to the touch, or as directed by the repair guide.

Can a damaged power supply cause a hair dryer to stop working?

If the power supply of your hair dryer is noticeably damaged, or no longer providing power to your hair dryer, then use this guide to replace the power supply. A damaged power supply can cause the hair dryer to stop working all together. It will not turn on when plugged into an outlet.

How do you use a hair dryer to soften adhesive?

The next four steps show how to use the hair dryer to soften strong adhesives, such as screen and frame adhesives. Place your device on a clean, heat resistant surface or mat. Keep flammable materials away from your work area. Set the temperature of your hair dryer to its "hot" setting.

How do you remove cables from a hair dryer?

Position the nozzle of your hair dryer 2-3 inches above the device and set the fan setting to "Low". Apply heat in small circles over the tape or sticker for 30 seconds. Peel the tape from the device. This step shows how to use your hair dryer to loosen cables adhered to your device.

They are much better than trying to heat up with warm air. If it sits below battery it warms up area where battery acid is and not area on top where air is or one side where you only heat part of battery and so it won't make that big of a difference as power is mostly dictated by weakest link. Even if it heats from all sides that still applies.
