What is a charging pile?

A charging pile, also known as an electric vehicle charging station or charging point, is a dedicated infrastructure designed to supply electric power to recharge electric vehicles. Essentially, it serves as the modern-day equivalent of a gas station but caters specifically to the needs of electric cars, motorcycles, and other EVs.

How does a car battery charger work?

After the charging gun head is inserted into the slow charging interface of the car, the AC charging pile sends the AC power to the on-board charger, which converts the AC power into DC power and cooperates with the car battery management system (BMS) to complete the battery charging.

How does a car charging pile work?

From the external structure, the charging pile is clearly divided into components such as the pile body, cable, and charging gun head. At first glance, it seems that the charging pile performs the charging work, but for the AC charging pile, the real charging process is completed by the on-board charger (OBC) built into the car.

How does a 4G charging pile work?

The charging pile has a built-in 4G SIM card, and then connects to the Internet through traffic, so that users can remotely control it through APP and mini-programs, which is more convenient. The 4G version of the product that you usually see has this function, of course, the price is higher.

Where does energy storage occur?

Literally, energy storage occurs in every facet of human society. The fundamental process of photosynthesis through which green plants generate food involves the conversion of solar energy from sunlight to chemical energy, which is stored in plant cells.

What meter do I need for a 7kw charging pile?

Charging piles above 7kw require a 380V meter. As mentioned above, the choice should be based on the power of the vehicle's own charger, while considering expansion needs such as changing vehicles. The mainstream new energy vehicle brands now all support 7KW charging piles.

charging piles (OPCP) and specialized public charging piles (SPCP) according to service object for heterogeneity analysis, and further studies the impacts of different types of public charging piles on PEV purchase for different purposes (leasing or non-business EV). The rest of the paper is organized as follows.
