

When is the best time to install solar panels

When should you install solar panels?

If you don't mind longer wait times and slightly higher installation fees and prefer to start bankrolling solar credits right away, you'll want to install solar panels during the summer. But if you're looking for shorter installation times and lower fees, you should wait for the spring or fall.

When is the best time to install a solar energy system?

Solar companies are most busy during the height of summer, pushing more ads and doing the most installations and repairs during this time. As a result, you may wait several weeks before your solar energy system can be installed, even longer in high-traffic states like California, Texas, or Arizona.

Should you install solar in the fall?

Fall has many of the same benefits as spring, such as cooler temperatures, less expensive installation fees, and lower wait times. Fall installations typically have a faster turnaround time than spring and summer, as fewer homeowners invest in solar during this season.

When should you start stockpiling solar panels?

By installing solar panels in the spring or at the beginning of summer, you can begin stockpiling solar credits early to offset the coming winter months. The Federal Investment Tax Credit (ITC), state tax incentive, and tax rebate programs have rollover and cut-off dates, most of which occur at the end of the year.

Is it a bad time to install solar power systems?

Overall, there is no bad time to install solar power systems, as you'll be making a major step toward paying lower electricity bills, producing clean energy, and improving the value of your home. But, there are times throughout the year that installations are less optimal.

Why is summer a good time to start a solar company?

Summer is the most popular season for the solar industry, and there are plenty of reasons for this. First off, summer is when solar companies advertise their services the most, creating sensation and awareness of their products and local incentives.
