

Which type of roof is best for solar panels?

The best type of roof for solar panels is a south facing roof as they tend to generate the most electricity from solar panels. South facing roof panels see the sun when it is at its most intense for the longest period of time, which is why they generate the most energy.

What is the best roof pitch for solar panels?

What's the best roof pitch for solar panels? The best roof pitch for solar panels is between 30-40°, but the angle of the roof can fall outside of this range and generate electricity effectively. Solar panels can still absorb sunlight even when horizontal.

What is on-roof solar roofing?

On-roof solar panels make up the most widely recognisable solar roofing system in the UK. The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics.

Should you buy solar roof tiles or solar panels?

You should now have all the information you need to decide whether to buy solar roof tiles or solar panels. In terms of value for money, solar panels are the clear winner, producing more solar electricity at a lower cost - which means you'll break even on your solar investment sooner.

Do you have the perfect roof for solar?

Let's get this out of the way first: Almost no one has the perfect roof for solar. Although some roof shapes and angles are better for solar production than others, solar panels are extremely versatile and can provide energy cost savings and carbon footprint reduction in a wide range of configurations.

Can a south facing roof be used for solar panels?

South facing roof panels see the sun when it is at its most intense for the longest period of time, which is why they generate the most energy. However, this doesn't mean that east or west facing roofs can't also be suitable for solar panels.
