Are solid-state batteries a viable alternative to conventional lithium-ion batteries?

Authors to whom correspondence should be addressed. Solid-state batteries (SSBs) have emerged as a promising alternative to conventional lithium-ion batteries, with notable advantages in safety, energy density, and longevity, yet the environmental implications of their life cycle, from manufacturing to disposal, remain a critical concern.

Are SSB batteries good for the environment?

However, the operational phase offers a brighter outlook, with SSBs demonstrating superior energy efficiency and a potentially lower overall carbon footprint, suggesting an advantageous environmental impact during their usage compared to conventional battery technologies.

Which battery has the best environmental performance?

Results showed that amongst the 4 batteries namely lead acid batteries, NCM, lithium manganese oxide (LMO), and LFP, the lead acid battery and LFP provide the worst and best environmental performance, respectively.

Are batteries sustainable?

Health risks associated with water and metal pollution during battery manufacturing and disposal are also addressed. The presented assessment of the impact spectrum of batteries places green practices at the forefront of solutions that elevate the sustainability of battery production, usages, and disposal.

What are the end-of-life treatment strategies for EV batteries?

The review further addresses end-of-life treatment strategies for EV batteries, including reuse, remanufacturing, and recycling, which are essential for mitigating the environmental impact of batteries and ensuring sustainable lifecycle management.

Are lithium ion batteries more environmentally friendly?

The research has shown that the two types of batteries show different environmental impact features in different phases. For example, LiFePO_4 batteries are more environmentally friendly in the phase of production, while $\text{Li}(\text{NiCoMn})\text{O}_2$ batteries are more eco-friendly in the application and transportation phases.

Research Interests My areas of research include 1) corporate environmental and energy strategy, 2) technology innovation and transfer of clean energy technologies (such as wind and solar power generation technologies), 3) inter-linkages between climate change and SDGs, 4) ESG investing, and 5) sustainable community development and sustainable tourism.
