

What is a dry or alkaline battery?

Dry or alkaline batteries are the most common type of consumer batteries used in everyday devices like remote controls, toys, and flashlights. They use a paste-like electrolyte, usually potassium hydroxide, which makes them more portable and less prone to leakage than wet batteries.

Can a lithium battery be shipped by a hazmat shipper?

Shipments requiring hazardous materials shipping papers are accepted from contract hazmat shippers only, and certain lithium batteries may not qualify for UPS service. There are many kinds of batteries available today and several are regulated as hazardous materials in transportation that may only be shipped by contract hazmat shippers.

Should you remove batteries before shipping?

If you are sending toys or electronics, ensure batteries are removed before you ship the item. But what about small batteries? Of course, many motorcycles and cars use lead acid batteries which when shipped second-hand may still have some of the liquid contained within - which would prohibit their transportation on that basis alone.

Why should you choose a specialised battery shop?

Specialised battery shops are expert at packaging batteries and have direct relationships via courier companies and hence are fully aware of all the legal and operational restrictions of sending batteries by post or courier.

Can I send alkaline batteries in the post?

There are no restrictions when sending alkaline batteries in the post, either within the UK or internationally. However, you do need to make sure they are packaged correctly to avoid damage during transit. Car batteries cannot be sent through our network - either within the UK or internationally.
